Program: BE- Civil Engineering

Curriculum Scheme: Revised 2012

Examination: Third Year Semester V

Course Code: CEC501 and Course Name: STRUCTURAL ANALYSIS II

Time: 1 hour Max. Marks: 50

Note to the students:- All the Questions are compulsory and carry equal marks .

Q1.	For beam shown below, the Stiffness coefficient S11 can be written as,
	1 2 1
	√¥ 3m /¥ 4m
	ZŽŽ
Option A:	4EI/6
Option B:	9EI/8
Option C:	4EI/3
Option D:	7EI/3
Q2.	Which of the following relation about plastic moment is correct?
Option A:	Mp = Zp /fy
Option B:	Mp = Zp + fy
Option C:	Mp = Zpfy
Option D:	Mp = Zp - fy
Q3.	The carry over factor in a prismatic member whose far end is fixed
Option A:	0
Option B:	0.5
Option C:	0.75
Option D:	1
0.4	
Q4.	Select the correct formula of fixed end moment of a fixed beam subjected to uniformly distributed load. (W = udl)
Option A:	$Wl^2/8$
Option B:	WI ² /36
Option C:	$Wl^2/12$
Option D:	$Wl^2/4$
Q5.	What is shape factor of a Rectangular section?
Option A:	1
Option B:	1.5
Option C:	2
Option D:	2.5

Q6.	Select correct formula of Distribution factor from the given option
	(k- Stiffness factor, ΣK – Joint Stiffness Factor)
Option A:	Κ *ΣΚ
Option B:	ΣK/K
Option C:	Κ/ΣΚ
Option D:	Κ+ΣΚ
Q7.	What is the Area of BMD, when a simply supported beam of span 6m, subjected
	to a point load 50 kN at the center
Option A:	225
Option B:	255
Option C:	275
Option D:	300
Q8.	Shape factor is always:
Option A:	Less than 1
Option B:	Equal to Zero
Option C:	Equal to infinity
Option D:	Greater than 1
Q9.	Clapeyron's three moment theorem cannot be applied to
Option A:	Continuous beam
Option B:	Fixed Beam
Option C:	Rigid jointed frame
Option D:	Simple Pin-Jointed Frame
Q10.	The stiffness matrix of element is given as $\frac{2EI}{L}\begin{bmatrix}2&1\\1&2\end{bmatrix}$. Then Flexibility matrix is,
Option A:	$\frac{L}{5EI} \begin{bmatrix} 2 & -1 \\ -1 & 2 \end{bmatrix}$
Option B:	$\frac{L}{6EI} \begin{bmatrix} 2 & -1 \\ -1 & 2 \end{bmatrix}$
Option C:	$\frac{L}{2EI} \begin{bmatrix} 2 & 1 \\ 1 & 2 \end{bmatrix}$
Option D:	$\frac{L}{3EI} \begin{bmatrix} 2 & -1 \\ -1 & 2 \end{bmatrix}$
Q11.	A continuous beam ABC, with support A as fixed support and C is a roller support. If member AB is of length 8m and carries a UDL of 30kN/m and member BC is of length 4m and carries a UDL of 20kN/m. What will be the distribution
Option A:	factor for member CB? 0.67

Option B:	0.25
Option C:	0.5
Option D:	1
Q12.	Find Degree of kinematical indeterminacy of following Structure
Option A:	11
Option B:	15
Option C:	9
Option D:	10
Q13.	In flexibility method of analysis of Rigid jointed plane frame what we must know from the following options
Option A:	Degree of kinematical Indeterminacy
Option B:	Degree of statically Indeterminacy
Option C:	Sway or non-Sway
Option D:	Symmetrical or Un symmetrical Structure
Q14.	How many possible internal forces are developed in two hinged Arches?
Option A:	1
Option B:	2
Option C:	3
Option D:	4
Q15.	In Moment distribution method, if the far end is hinged Stiffness factor is equal to:
Option A:	3EI/L
Option B:	4EI/L
Option C:	2EI/L
Option D:	5EI/L
Q16.	When deflection due to temperature stresses is to be evaluated for a determinate frame ,we apply following at free end of the frame :
Option A:	UDL
Option B:	UVL
Option C:	Unit load

Option A: Option A: Option B: 11 Option C: 15 Option D: Option B: 120 Q18. Any Structure is said to be unstable, when: Option D: Degree of statically Indeterminacy is less than zero Option B: Degree of statically Indeterminacy is less than zero Option B: Degree of statically Indeterminacy is sequal to zero Static equilibrium conditions are satisfied Option D: Degree of statically Indeterminacy is greater than 1 Q19. Which of the following loads are termed as indirect loading? Option A: Change in Temperature Option A: Option C: Point load Option C: Point load Option D: Uniformly varying load Q20. If a Simple pin-jointed frame is having internal indeterminacy to one degree, what should we do to analyses it by force method Option A: Add one member Option C: Add two members Option C: Add two members Option C: Add two members Option C: Option C: Principle of virtual work Option B: Castigliano's first theorem Option B: Castigliano's second theorem Option C: For evaluation of deflections due to temperature stresses in frames which of the following properties of member are required? Option A: Length and depth of member Option B: Weight of member Option A: Length and depth of member Option B: Woment of inertia	Option D:	Unit deflection
Option A: 10 Option B: 11 Option D: 20 Q18. Any Structure is said to be unstable, when: Option A: Degree of statically Indeterminacy is less than zero Option B: Degree of statically Indeterminacy is less than zero Option B: Degree of statically Indeterminacy is equal to zero Option C: Static equilibrium conditions are satisfied Option D: Degree of statically Indeterminacy is greater than 1 Q19. Which of the following loads are termed as indirect loading? Option A: Change in Temperature Option B: Uniformly distributed load Option C: Point load Option C: Point load Option D: Uniformly varying load Q20. If a Simple pin-jointed frame is having internal indeterminacy to one degree, what should we do to analyses it by force method Option A: Add one member Option B: Remove one member Option C: Add two members Option D: Don't add or remove members Q21. Theorem of least work is also known as: Option A: Castigliano's first theorem Option B: Castigliano's second theorem Option C: Principle of virtual work Option D: Betty's theorem Q22. For evaluation of deflections due to temperature stresses in frames which of the following properties of member are required? Option A: Length and depth of member Option B: Weight of member	3 p 0.311 21	
Option A: 10 Option B: 11 Option C: 15 Option D: 20 Q18. Any Structure is said to be unstable, when: Option A: Degree of statically Indeterminacy is less than zero Option A: Degree of statically Indeterminacy is equal to zero Option B: Degree of statically Indeterminacy is equal to zero Option C: Static equilibrium conditions are satisfied Option D: Degree of statically Indeterminacy is greater than 1 Q19. Which of the following loads are termed as indirect loading? Option A: Change in Temperature Option B: Uniformly distributed load Option C: Point load Option D: Uniformly varying load Q20. If a Simple pin-jointed frame is having internal indeterminacy to one degree, what should we do to analyses it by force method Option A: Add one member Option B: Remove one member Option C: Add two members Option D: Don't add or remove members Q21. Theorem of least work is also known as: Option A: Castigliano's first theorem Option B: Castigliano's second theorem Option C: Principle of virtual work Option D: Betty's theorem Q22. For evaluation of deflections due to temperature stresses in frames which of the following properties of member are required? Option A: Length and depth of member Option B: Weight of member	Q17.	Find Degree of statically indeterminacy of following Structure
Option B: 11 Option C: 15 Option D: 20 Q18. Any Structure is said to be unstable, when: Option A: Degree of statically Indeterminacy is less than zero Option B: Degree of statically Indeterminacy is equal to zero Option B: Degree of statically Indeterminacy is equal to zero Option D: Static equilibrium conditions are satisfied Option D: Degree of statically Indeterminacy is greater than 1 Q19. Which of the following loads are termed as indirect loading? Option A: Change in Temperature Option B: Uniformly distributed load Option C: Point load Option D: Uniformly varying load Q20. If a Simple pin-jointed frame is having internal indeterminacy to one degree, what should we do to analyses it by force method Option A: Add one member Option B: Remove one member Option B: Remove one member Option C: Add two members Option D: Don't add or remove members Q21. Theorem of least work is also known as: Q21. Theorem of least work is also known as: Option A: Castigliano's second theorem Option B: Castigliano's second theorem Option C: Principle of virtual work Option D: Betty's theorem Q22. For evaluation of deflections due to temperature stresses in frames which of the following properties of member are required? Option A: Length and depth of member Option B: Weight of member		
Option C: 15 Option D: 20 Q18. Any Structure is said to be unstable, when: Option A: Degree of statically Indeterminacy is less than zero Option B: Degree of statically Indeterminacy is equal to zero Option C: Static equilibrium conditions are satisfied Option D: Degree of statically Indeterminacy is greater than 1 Q19. Which of the following loads are termed as indirect loading? Option A: Change in Temperature Option B: Uniformly distributed load Option C: Point load Option D: Uniformly varying load Q20. If a Simple pin-jointed frame is having internal indeterminacy to one degree, what should we do to analyses it by force method Option B: Remove one member Option B: Remove one member Option C: Add two members Option D: Don't add or remove members Q21. Theorem of least work is also known as: Option A: Castigliano's first theorem Option C: Principle of virtual work Option D: Betty's theorem Q22. For evaluation of deflections due to temperature stresses in frames which of the following properties of member are required? Option A: Length and depth of member Option B: Weight of member	Option A:	10
Option D: 20 Q18. Any Structure is said to be unstable, when: Option A: Degree of statically Indeterminacy is less than zero Option B: Degree of statically Indeterminacy is equal to zero Option C: Static equilibrium conditions are satisfied Option D: Degree of statically Indeterminacy is greater than 1 Q19. Which of the following loads are termed as indirect loading? Option A: Change in Temperature Option B: Uniformly distributed load Option C: Point load Option D: Uniformly varying load Q20. If a Simple pin-jointed frame is having internal indeterminacy to one degree, what should we do to analyses it by force method Option A: Add one member Option B: Remove one member Option C: Add two members Option D: Don't add or remove members Q21. Theorem of least work is also known as: Option A: Castigliano's first theorem Option B: Castigliano's second theorem Option C: Principle of virtual work Option D: Betty's theorem Q22. For evaluation of deflections due to temperature stresses in frames which of the following properties of member are required? Option A: Length and depth of member Option B: Weight of member	Option B:	11
Q18. Any Structure is said to be unstable, when: Option A: Degree of statically Indeterminacy is less than zero Option B: Degree of statically Indeterminacy is equal to zero Option C: Static equilibrium conditions are satisfied Option D: Degree of statically Indeterminacy is greater than 1 Q19. Which of the following loads are termed as indirect loading? Option A: Change in Temperature Option B: Uniformly distributed load Option C: Point load Option D: Uniformly varying load Q20. If a Simple pin-jointed frame is having internal indeterminacy to one degree, what should we do to analyses it by force method Option B: Remove one member Option B: Remove one member Option C: Add two members Option D: Don't add or remove members Q21. Theorem of least work is also known as: Option A: Castigliano's first theorem Option B: Castigliano's second theorem Option C: Principle of virtual work Option D: Betty's theorem Q22. For evaluation of deflections due to temperature stresses in frames which of the following properties of member are required? Option A: Length and depth of member Option B: Weight of member	Option C:	15
Option A: Degree of statically Indeterminacy is less than zero Option B: Degree of statically Indeterminacy is equal to zero Option C: Static equilibrium conditions are satisfied Option D: Degree of statically Indeterminacy is greater than 1 Q19. Which of the following loads are termed as indirect loading? Option A: Change in Temperature Option B: Uniformly distributed load Option C: Point load Option D: Uniformly varying load Q20. If a Simple pin-jointed frame is having internal indeterminacy to one degree, what should we do to analyses it by force method Option A: Add one member Option B: Remove one member Option C: Add two members Option C: Add two members Q21. Theorem of least work is also known as: Option B: Castigliano's first theorem Option B: Castigliano's second theorem Option C: Principle of virtual work Option D: Betty's theorem Q22. For evaluation of deflections due to temperature stresses in frames which of the following properties of member are required? Option A: Length and depth of member Option B: Weight of member	•	20
Option A: Degree of statically Indeterminacy is less than zero Option B: Degree of statically Indeterminacy is equal to zero Option C: Static equilibrium conditions are satisfied Option D: Degree of statically Indeterminacy is greater than 1 Q19. Which of the following loads are termed as indirect loading? Option A: Change in Temperature Option B: Uniformly distributed load Option C: Point load Option D: Uniformly varying load Q20. If a Simple pin-jointed frame is having internal indeterminacy to one degree, what should we do to analyses it by force method Option A: Add one member Option B: Remove one member Option C: Add two members Option C: Add two members Q21. Theorem of least work is also known as: Option B: Castigliano's first theorem Option B: Castigliano's second theorem Option C: Principle of virtual work Option D: Betty's theorem Q22. For evaluation of deflections due to temperature stresses in frames which of the following properties of member are required? Option A: Length and depth of member Option B: Weight of member		
Option B: Degree of statically Indeterminacy is equal to zero Option C: Static equilibrium conditions are satisfied Option D: Degree of statically Indeterminacy is greater than 1 Q19. Which of the following loads are termed as indirect loading? Option A: Change in Temperature Option B: Uniformly distributed load Option C: Point load Option D: Uniformly varying load Q20. If a Simple pin-jointed frame is having internal indeterminacy to one degree, what should we do to analyses it by force method Option A: Add one member Option B: Remove one member Option C: Add two members Option D: Don't add or remove members Q21. Theorem of least work is also known as: Option A: Castigliano's first theorem Option B: Castigliano's second theorem Option C: Principle of virtual work Option D: Betty's theorem Q22. For evaluation of deflections due to temperature stresses in frames which of the following properties of member are required? Option A: Length and depth of member Option B: Weight of member		
Option C: Static equilibrium conditions are satisfied Option D: Degree of statically Indeterminacy is greater than 1 Q19. Which of the following loads are termed as indirect loading? Option A: Change in Temperature Option B: Uniformly distributed load Option C: Point load Option D: Uniformly varying load Q20. If a Simple pin-jointed frame is having internal indeterminacy to one degree, what should we do to analyses it by force method Option A: Add one member Option B: Remove one member Option C: Add two members Option D: Don't add or remove members Q21. Theorem of least work is also known as: Option A: Castigliano's first theorem Option B: Castigliano's second theorem Option C: Principle of virtual work Option D: Betty's theorem Q22. For evaluation of deflections due to temperature stresses in frames which of the following properties of member are required? Option A: Length and depth of member Option B: Weight of member	Option A:	
Option D: Degree of statically Indeterminacy is greater than 1 Q19. Which of the following loads are termed as indirect loading? Option A: Change in Temperature Option B: Uniformly distributed load Option C: Point load Option D: Uniformly varying load Q20. If a Simple pin-jointed frame is having internal indeterminacy to one degree, what should we do to analyses it by force method Option A: Add one member Option B: Remove one member Option C: Add two members Option D: Don't add or remove members Q21. Theorem of least work is also known as: Option A: Castigliano's first theorem Option B: Castigliano's second theorem Option C: Principle of virtual work Option D: Betty's theorem Q22. For evaluation of deflections due to temperature stresses in frames which of the following properties of member are required? Option A: Length and depth of member Option B: Weight of member	Option B:	
Q19. Which of the following loads are termed as indirect loading? Option A: Change in Temperature Option B: Uniformly distributed load Option C: Point load Option D: Uniformly varying load Q20. If a Simple pin-jointed frame is having internal indeterminacy to one degree, what should we do to analyses it by force method Option A: Add one member Option B: Remove one member Option C: Add two members Option D: Don't add or remove members Q21. Theorem of least work is also known as: Option A: Castigliano's first theorem Option B: Castigliano's second theorem Option C: Principle of virtual work Option D: Betty's theorem Q22. For evaluation of deflections due to temperature stresses in frames which of the following properties of member are required? Option A: Length and depth of member	Option C:	Static equilibrium conditions are satisfied
Option A: Change in Temperature Option B: Uniformly distributed load Option C: Point load Option D: Uniformly varying load Q20. If a Simple pin-jointed frame is having internal indeterminacy to one degree, what should we do to analyses it by force method Option A: Add one member Option B: Remove one member Option C: Add two members Option D: Don't add or remove members Q21. Theorem of least work is also known as: Option A: Castigliano's first theorem Option B: Castigliano's second theorem Option C: Principle of virtual work Option D: Betty's theorem Q22. For evaluation of deflections due to temperature stresses in frames which of the following properties of member are required? Option A: Length and depth of member Option B: Weight of member	Option D:	Degree of statically Indeterminacy is greater than 1
Option A: Change in Temperature Option B: Uniformly distributed load Option C: Point load Option D: Uniformly varying load Q20. If a Simple pin-jointed frame is having internal indeterminacy to one degree, what should we do to analyses it by force method Option A: Add one member Option B: Remove one member Option C: Add two members Option D: Don't add or remove members Q21. Theorem of least work is also known as: Option A: Castigliano's first theorem Option B: Castigliano's second theorem Option C: Principle of virtual work Option D: Betty's theorem Q22. For evaluation of deflections due to temperature stresses in frames which of the following properties of member are required? Option A: Length and depth of member Option B: Weight of member	Q19.	Which of the following loads are termed as indirect loading?
Option B: Uniformly distributed load Option C: Point load Option D: Uniformly varying load Q20. If a Simple pin-jointed frame is having internal indeterminacy to one degree, what should we do to analyses it by force method Option A: Add one member Option B: Remove one member Option C: Add two members Option D: Don't add or remove members Q21. Theorem of least work is also known as: Option A: Castigliano's first theorem Option B: Castigliano's second theorem Option C: Principle of virtual work Option D: Betty's theorem Q22. For evaluation of deflections due to temperature stresses in frames which of the following properties of member are required? Option A: Length and depth of member Option B: Weight of member	Option A:	
Option C: Point load Option D: Uniformly varying load Q20. If a Simple pin-jointed frame is having internal indeterminacy to one degree, what should we do to analyses it by force method Option A: Add one member Option B: Remove one member Option C: Add two members Option D: Don't add or remove members Q21. Theorem of least work is also known as: Option A: Castigliano's first theorem Option B: Castigliano's second theorem Option C: Principle of virtual work Option D: Betty's theorem Q22. For evaluation of deflections due to temperature stresses in frames which of the following properties of member are required? Option A: Length and depth of member Option B: Weight of member	•	
Q20. If a Simple pin-jointed frame is having internal indeterminacy to one degree, what should we do to analyses it by force method Option A: Add one member Option B: Remove one member Option C: Add two members Option D: Don't add or remove members Q21. Theorem of least work is also known as: Option A: Castigliano's first theorem Option B: Castigliano's second theorem Option C: Principle of virtual work Option D: Betty's theorem Q22. For evaluation of deflections due to temperature stresses in frames which of the following properties of member are required? Option A: Length and depth of member Option B: Weight of member	•	Point load
what should we do to analyses it by force method Option A: Add one member Option B: Remove one member Option C: Add two members Option D: Don't add or remove members Q21. Theorem of least work is also known as: Option A: Castigliano's first theorem Option B: Castigliano's second theorem Option C: Principle of virtual work Option D: Betty's theorem Q22. For evaluation of deflections due to temperature stresses in frames which of the following properties of member are required? Option A: Length and depth of member Option B: Weight of member	Option D:	Uniformly varying load
Option B: Remove one member Option C: Add two members Option D: Don't add or remove members Q21. Theorem of least work is also known as: Option A: Castigliano's first theorem Option B: Castigliano's second theorem Option C: Principle of virtual work Option D: Betty's theorem Q22. For evaluation of deflections due to temperature stresses in frames which of the following properties of member are required? Option A: Length and depth of member Option B: Weight of member	Q20.	
Option C: Add two members Option D: Don't add or remove members Q21. Theorem of least work is also known as: Option A: Castigliano's first theorem Option B: Castigliano's second theorem Option C: Principle of virtual work Option D: Betty's theorem Q22. For evaluation of deflections due to temperature stresses in frames which of the following properties of member are required? Option A: Length and depth of member Option B: Weight of member	Option A:	Add one member
Option D: Don't add or remove members Q21. Theorem of least work is also known as: Option A: Castigliano's first theorem Option B: Castigliano's second theorem Option C: Principle of virtual work Option D: Betty's theorem Q22. For evaluation of deflections due to temperature stresses in frames which of the following properties of member are required? Option A: Length and depth of member Option B: Weight of member	Option B:	Remove one member
Q21. Theorem of least work is also known as: Option A: Castigliano's first theorem Option B: Castigliano's second theorem Option C: Principle of virtual work Option D: Betty's theorem Q22. For evaluation of deflections due to temperature stresses in frames which of the following properties of member are required? Option A: Length and depth of member Option B: Weight of member	Option C:	Add two members
Option A: Castigliano's first theorem Option B: Castigliano's second theorem Option C: Principle of virtual work Option D: Betty's theorem Q22. For evaluation of deflections due to temperature stresses in frames which of the following properties of member are required? Option A: Length and depth of member Option B: Weight of member	Option D:	Don't add or remove members
Option A: Castigliano's first theorem Option B: Castigliano's second theorem Option C: Principle of virtual work Option D: Betty's theorem Q22. For evaluation of deflections due to temperature stresses in frames which of the following properties of member are required? Option A: Length and depth of member Option B: Weight of member	Q21.	Theorem of least work is also known as:
Option B: Castigliano's second theorem Option C: Principle of virtual work Option D: Betty's theorem Q22. For evaluation of deflections due to temperature stresses in frames which of the following properties of member are required? Option A: Length and depth of member Option B: Weight of member		
Option C: Principle of virtual work Option D: Betty's theorem Q22. For evaluation of deflections due to temperature stresses in frames which of the following properties of member are required? Option A: Length and depth of member Option B: Weight of member	•	
Option D: Betty's theorem Q22. For evaluation of deflections due to temperature stresses in frames which of the following properties of member are required? Option A: Length and depth of member Option B: Weight of member	•	
following properties of member are required? Option A: Length and depth of member Option B: Weight of member	•	
Option A: Length and depth of member Option B: Weight of member	Q22.	·
Option B: Weight of member	Option A:	
	•	
	•	-

Option D:	Tensile strength of member
Q23.	ABC Two hinged parabolic arches subjected to udl W kN/m over entire span,
	Where A and B are supports and C is at Crown. Find the vertical reaction at A.
Option A:	W/2
Option B:	WI/2
Option C:	WI/3
Option D:	WI/4
Q24.	How many displacement components will be there in a beam, one end is hinged
	and other is having roller supports
Option A:	2
Option B:	1
Option C:	3
Option D:	4
Q25.	How many internal forces will be developed in a member of simple pin jointed
	frame (Trusses)?
Option A:	2
Option B:	1
Option C:	3
Option D:	4
