

**University of Mumbai**  
**Examination First Half 2022**

Program: **BE Civil**  
Examination: **SE Semester: IV**  
Course Name: **BMCT**

Curriculum Scheme: **Rev2019**  
Course Code: **CEC 404**

**Question bank**

---

**Multiple Choice Questions**

|            |  |
|------------|--|
| <b>Q1.</b> | <b>Choose the correct option for following questions. All the Questions are compulsory and carry equal marks</b> |
| 1          | In machine mixing of concrete, the drum of concrete mixer is rotated to make about                               |
| Option A:  | 35 rotations   |
| Option B:  | 50 rotations   |
| Option C:  | 65 rotations   |
| Option D:  | 80 rotations   |
|            |  |
| 2          | Gypsum is added during the manufacture of cement   |
| Option A:  | while mixing the raw materials   |
| Option B:  | during burning in the kiln   |
| Option C:  | at the beginning of grinding the clinker   |
| Option D:  | after grinding the clinker   |
|            |  |
| 3          | Plasticizers are used in situations  |
| Option A:  | Where high degree of workability is required   |
| Option B:  | Where medium degree of workability is required   |
| Option C:  | Where very low degree of workability is required   |
| Option D:  | Where low degree of workability is required  |
|            |  |
| 4          | While compacting the concrete by a mechanical vibrator, the slump should not exceed                              |
| Option A:  | 2.5 cm   |
| Option B:  | 5.0 cm   |
| Option C:  | 7.5 cm   |
| Option D:  | 10 cm  |
|            |  |
| 5          | The compound responsible for initial setting of cement is  |
| Option A:  | Tricalcium aluminate   |
| Option B:  | Tricalcium silicate  |
| Option C:  | Dicalcium silicate   |
| Option D:  | Tetra alumino ferrite  |
|            |  |
| 6.         | An ultrasonic pulse velocity test is an  |
| Option A:  | Ex-situ, nondestructive test   |
| Option B:  | In-situ, nondestructive test   |
| Option C:  | Ex-situ, destructive test  |
| Option D:  | In-situ, destructive test  |
|            |  |

|           |  |
|-----------|--|
| 7         | Bulletproof glass has  |
| Option A: | a number of layers all of same thickness   |
| Option B: | outer layers thinner than inner layers   |
| Option C: | outer layers thicker than inner layers   |
| Option D: | inner layers with steel wires  |
|           |  |
| 8.        | For one cubic metre of brick masonry, number of bricks required, is  |
| Option A: | 400  |
| Option B: | 425  |
| Option C: | 450  |
| Option D: | 500  |
|           |  |
| 9         | Field test for strength of good bricks is to drop it from a height of _____ and they should not break.         |
| Option A: | 0.75 m   |
| Option B: | 1.0 m  |
| Option C: | 1.2 m  |
| Option D: | 1.5 m  |
|           |  |
| 10        | Following method gives the best result for optimum dose of superplasticizer                                    |
| Option A: | Slump cone test  |
| Option B: | Marsh cone test  |
| Option C: | Flow table test  |
| Option D: | Compaction factor test   |
|           |  |
| 11        | Di-calcium silicate (C2S)  |
| Option A: | hydrates rapidly   |
| Option B: | generates less heat of hydration   |
| Option C: | hardens rapidly  |
| Option D: | provides less ultimate strength to cement  |
|           |  |
|           |  |
| 12        | Initial setting of cement is caused due to   |
| Option A: | Tri-calcium silicate   |
| Option B: | Di-calcium silicate  |
| Option C: | Tri-calcium aluminate  |
| Option D: | Tetra calcium aluminoferrite.  |
|           |  |
| 13        | If 1500 g of water is required to have a cement paste 1875 g of normal consistency, the percentage of water is |
| Option A: | 20%  |
| Option B: | 25%  |
| Option C: | 30%  |
| Option D: | 40%  |
|           |  |
| 14        | The aggregate impact value of the aggregate is a measure of its  |
| Option A: | Strength.  |
| Option B: | Abrasion resistance  |
| Option C: | Ductility.   |
| Option D: | Toughness.   |
|           |  |

|           |  |
|-----------|--|
| 15        | In volume batching 1:3:6 concrete, ingredients required per 50 kg bag of cement are:                           |
| Option A: | 70 litres of sand and 120 litres of aggregates   |
| Option B: | 70 kg of sand and 140 litres of aggregates   |
| Option C: | 105 litres of sand and 140 litres of aggregates  |
| Option D: | 105 litres of sand and 210 litres of aggregates  |
| 16        | While compacting concrete by a mechanical vibrator, the slump should not exceed                                |
| Option A: | 2.5 cm   |
| Option B: | 5.0 cm   |
| Option C: | 7.5 cm   |
| Option D: | 10 cm  |
| 17        | Workability can be improved by adding  |
| Option A: | air-entraining agent   |
| Option B: | foaming agent  |
| Option C: | oily-agent   |
| Option D: | air-entraining, foaming as well as oily agent.   |
| 18        | The commonly used raw material in the manufacture of cement, is  |
| Option A: | slate  |
| Option B: | sand stone   |
| Option C: | lime stone   |
| Option D: | basalt.  |
| 19        | Knots in timber are  |
| Option A: | Defects caused by crushing fibres  |
| Option B: | Splits radiating from the Centre   |
| Option C: | Speckled strains   |
| Option D: | Signs of branches cut off  |
| 20        | For a concrete mix 1:3:6 and water cement ratio 0.6 both by weight, the quantity of water required per bag, is |
| Option A: | 10 kg  |
| Option B: | 12 kg  |
| Option C: | 14 kg  |
| Option D: | 16 kg  |
| 21        | Dressing of the stone is made  |
| Option A: | immediately after quarrying  |
| Option B: | after three months of quarrying  |
| Option C: | just before using for building works   |
| Option D: | after seasoning  |
| 22        | Which type of glass is regarded as the most heat resistant?  |
| Option A: | Fused silica   |
| Option B: | Aluminosilicate  |
| Option C: | 96% silica   |
| Option D: | Borosilicate   |

|           |  |
|-----------|--|
| 23        | In lean mixes larger aggregate gives ..... strength while in rich mixes the smaller aggregate which yields ..... strength                    |
| Option A: | Higher, Higher   |
| Option B: | Lower, Lower   |
| Option C: | Higher, lower  |
| Option D: | Lower, Lower   |
| 24        | The cement to dry sand proportion recommended for plastering concrete surface is   |
| Option A: | 1 : 3  |
| Option B: | 1 : 6  |
| Option C: | 1 : 8  |
| Option D: | 1 : 10   |
| 25        | Bulking of sand is due to  |
| Option A: | water films  |
| Option B: | swelling of sand   |
| Option C: | added mass of water  |
| Option D: | Presence of air  |
| 26        | Target mean strength (N/sqmm) of M45 grade of concrete is  |
| Option A: | 45.00  |
| Option B: | 50.00  |
| Option C: | 53.25  |
| Option D: | 67.5   |
| 27        | When Pulse velocity by cross-probing is between 3.5 to 4.5 km/sec, concrete quality is considered as ..                                      |
| Option A: | Excellent  |
| Option B: | Good   |
| Option C: | Medium   |
| Option D: | low  |
| 28        | The finishing of stone in which the exposed face is not dressed, only the projections greater than 80mm removed by light hammering is called |
| Option A: | Punched finish   |
| Option B: | Vermiculated finish  |
| Option C: | Quarry faced finish  |
| Option D: | Combed finish  |
| 29        | If the water cement ratio to be used is 0.5, then water to be added to one bag of cement is  |
| Option A: | 30 Litre   |
| Option B: | 25 Litre   |
| Option C: | 20 Litre   |
| Option D: | 18 Litre   |
| 30        | The clay to be used for manufacturing bricks for a large project, is dugout and allowed to weather throughout                                |
| Option A: | the monsoon  |
| Option B: | the winter   |
| Option C: | the summer   |

|           |   |
|-----------|---|
| Option D: | none of these   |
| 31        | What is the ideal range of slump in mm as per IS code for sections with congested reinforcement not suitable for vibration? |
| Option A: | 50-75   |
| Option B: | 25-50   |
| Option C: | 75-100  |
| Option D: | 100-150   |
| 32        | Honeycomb and cracks may occur in timber due to   |
| Option A: | erroneous conversion  |
| Option B: | erroneous seasoning   |
| Option C: | attack by fungi   |
| Option D: | contact with water for a long time  |

**Subjective questions (10 marks each) for Q No 2,3 and 4**

|    |  |
|----|--|
| 1  | Calculate how much quantities of ingredients of concrete in 'Kg' are required if the nominal mix proportions for M20 grade of concrete by ratio are 0.6 : 1 : 1.67 : 3.33 is used. Take Density of concrete is 2350Kg/m <sup>3</sup>   |
| 2  | Explain following nondestructive testing methods :<br>a) Rebound Hammer Test<br>b) Ultrasonic Pulse Velocity Test  |
| 3  | Explain Damp proofing, water proofing and Termite proofing.  |
| 4  | Explain Laboratory tests on durability of concrete<br>a) Permeability test,<br>b) Rapid chloride penetration test (RCPT)   |
| 5  | Explain step by step procedure to design concrete mix for compressive strength as per IS 10262.  |
| 6  | Explain the dry process of manufacture of cement.  |
| 7  | Explain various operations involved in RMC PLANT during concreting.  |
| 8  | Design a concrete mix M30 to be used in structural elements by IS method for following requirements.<br>(i) Maximum size of the available aggregate 20 mm<br>(ii) Shape of coarse aggregate angular<br>(iii) Degree of workability desired, compacting factor 0.85<br>(iv) Degree of quality control good<br>(v) Type of exposure moderate<br>(vi) Test data for Concrete Making Materials<br>a. Specific gravity of cement 3.15<br>b. Specific gravity of coarse aggregate 2.72<br>c. Specific gravity of fine aggregate 2.66<br>d. Water absorption (air dry to saturated surface dry) in coarse aggregate, per cent 0.5<br>e. Surface moisture Coarse aggregate nil<br>f. Fine aggregate, per cent 2,<br>Sand zone III. |
| 9  | Explain various tests carried on lime.   |
| 10 | What are the defects in timber? Describe briefly.  |

|    |  |
|----|--|
| 11 | What are the types of concrete mixes as per IS: 456? What information is required for mix design from the site of the work? Describe the advantages of Ready Mix Concrete.               |
| 12 | Which IS code is required to perform compressive strength test on burnt clay brick? Explain step by step procedure to determine compressive strength of brick in the lab as per IS code. |
| 13 | Make a list of 15 materials used in building construction. Explain any four of them in detail.   |
| 14 | Write a note on Glass with details of its Properties, types and uses   |
| 15 | Write a note on Paints and Varnishes:  |

**Subjective questions (5 marks each) for Q no., 2,3 and 4**

|    |  |
|----|--|
| 1  | Explain defects in painting.                                     |
| 2  | Write note on RMC  |
| 3  | Explain demerits of distemper as compared to paints.             |
| 4  | Explain different types of mortars.                              |
| 5  | Explain in brief fineness modulus of course and fine aggregates. |
| 6  | Explain slip form work.  |
| 7  | Explain Ultrasonic pulse velocity test.                          |
| 8  | Explain which field tests are conducted in the field on cement?  |
| 9  | Explain manufacturing process of cement                          |
| 10 | State engineering properties of ceramics with its uses.          |
| 11 | Explain –Quality control of concrete                             |
| 12 | What are retarders and accelerators? Explain their uses.         |
| 13 | Write short note on Autoclaved Aerated Concrete (AAC) blocks     |
| 14 | Write short note on glass fibre reinforced plastic               |
| 15 | Write short note on sound insulating materials.                  |
