University of Mumbai

Program: _First Year (All Branches) Engineering- SEM-II
Curriculum Scheme: Rev 2019
Engineering Chemistry-II

Question Bank

NOTE: Atomic Weights: C = 12, H = 1, O = 16, N = 14, S = 32, Na = 23 and Br = 80

| Q1. | Choose the correct option for following questions. All the Questions are |
|--------------|--|
| Q1. | compulsory and carry equal marks(2 marks each) |
| 1. | Which of the following spectroscopy can be used to quantify the concentration of protein and DNA in solution |
| Option A: | Infra-Red spectroscopy |
| Option B: | UV spectroscopy |
| Option C: | NMR spectroscopy |
| Option D: | Raman spectroscopy |
| 2. | The standard emf of the following cell is 0.012V Sn(s) Sn2+ (aq)(1M) Pb2+(aq)1M Pb(s) Calculate standard electrode potential of Sn electrode, if standard electrode potential for Pb electrode is -0.125V. |
| Option A: | -0.137 |
| Option B: | -0.113 |
| Option C: | -0.005 |
| Option D: | -0.245 |
| 3. | In greener synthesis of indigo, traditionally used Aniline is replaced by the following substrate. |
| Option A: | D-glucose |
| Option B: | Benzene |
| Option C: | Toluene |
| Option D: | L-tryptophan |

| | |
|-----------|--|
| | |
| 4. | Galvanization is preferred to tinning since, |
| | i) Zinc is more electro positive than ironii) Zinc coating protects iron sacrificially |
| | iii) Punctured tin coating causes intense corrosion |
| Option A: | Only (i) |
| Option B: | Only (iii) |
| Option C: | (i), (ii) &(iii) |
| Option D: | Only (ii) |
| орион В. | |
| 5. | Corrosion in welded stainless steel is an example of |
| Option A: | Galvanic corrosion |
| Option B: | Pitting corrosion |
| Option C: | Waterline corrosion |
| Option D: | Inter granular corrosion |
| - | |
| 6. | A sample of coal has following composition by mass $C = 70 \%$, $O = 8 \%$, $H = 10 \%$, |
| | N = 3 %, S = 2%, Ash = 7 %.Calculate H.C.V. using Dulong formula |
| Option A: | 8805.80kcal/kg |
| Option B: | 8277.80 kcal/kg |
| Option C: | 8877.80 kcal/kg |
| Option D: | 8205.80 kcal/kg |
| | Arrange n-octane, naphthalene and isooctane in the increasing order of their |
| 7. | knocking tendency. |
| Option A: | n-octane < Naphthalene < isooctane |
| Option B: | Naphthalene < isooctane< n-octane |
| Option C: | Isooctane < Naphthalene < n-octane |
| Option D: | Isooctane = n-octane < Naphthalene |
| | |
| 8. | A cell is constructed from Ni+ 2 / Ni and Cu+2/ Cu half cells. The standard |
| O 1: A | potential of the cell is Given E0Ni = - 0.257 V and E0Cu = 0.337 V |
| Option A: | - 0.594 V |
| Option B: | 0.008 V |
| Option C: | - 0.008 V |
| Option D: | 0.594 V |
| 9. | Which of the fellowing reactions are Croon in notions |
| 9. | Which of the following reactions are Green in nature: Addition reactions, Substitution reactions, Elimination reactions, Rearrangement |
| | reactions |
| Option A: | Addition and Substitution reactions |
| Option B: | Rearrangement and Elimination reactions |
| Option C: | Rearrangement and Addition reactions |
| Option D: | Substitution and Elimination reactions |
| | <u> </u> |
| 10. | An iron object is plated with a coating of Nickel to protect against corrosion. Does |
| | the Nickel protect iron by cathodic protection? Give suitable reason for your answer. |
| Option A: | No. The oxidation potential of Ni/Ni+2 is lower than that for Fe/Fe+2 |
| Option B: | Yes. The oxidation potential of Ni/Ni+2 is lower than that for Fe/Fe+2 |
| Option C: | No. The oxidation potential of Fe/Fe+2 is lower than that for Ni/Ni+2 |
| Option D: | Yes. The oxidation potential of Fe/Fe+2 is lower than that for Ni/Ni+2 |
| | |

| 11. | In quantum Mechanics, a set of rule exist, known as 'Selection rules' that basically |
|-----------|--|
| | explains which transitions are 'allowed transitions'. Which amongst the following |
| | statements is an 'allowed transitions'? |
| Option A: | The spin quantum number of an electron doesnot change during the absorption or |
| | emission of light in an 'allowed transition'. |
| Option B: | The change in orbital quantum number during an 'allowed transition' is zero. |
| Option C: | There is no change in magnetic quantum number during an 'allowed transition'. |
| Option D: | The change in magnetic quantum number during a 'forbidden transition' is either |
| | zero, or +1, or -1. |
| | |
| 12. | Small anodic area and large cathode area results in - |
| Option A: | Slow corrosion because of decreased demand of electrons by the small anode. |
| Option B: | Intense corrosion because of huge demand of electrons by the small anode. |
| Option C: | Slow corrosion because of decreased demand of electrons by the large cathode. |
| Option D: | Intense corrosion because of huge demand of electrons by the large cathode. |
| | |

| 13. | Selection rule to produce rotational spectra is |
|-----------|---|
| Option A: | Dipole moment of molecule must change during vibrations |
| Option B: | Molecule must have permanent dipole moment |
| Option C: | Presence of chromophore in a molecule |
| Option D: | Presence of unpaired electron in a molecule |
| | |
| 14. | Benzene is an important industrial solvent which is classified as |
| Option A: | Non-toxic |
| Option B: | Non-flammable |
| Option C: | Biodegradable |
| Option D: | Carcinogenic |
| | |
| 15. | Which of the following statement is incorrect about an electrochemical cell |
| Option A: | Oxidation occurs at anode and reduction at cathode |
| Option B: | Chemical energy is converted into electrical energy |
| Option C: | Cell can work indefinitely |
| Option D: | Salt bridge maintains electrical neutrality of the electrolytes |
| | |
| 16. | If a metal rod exhibits holes on its surface due to corrosion, the type of corrosion is |
| Option A: | Waterline |
| Option B: | Galvanic |
| Option C: | Pitting |
| Option D: | Stress |
| | |
| 17. | A good fuel has |
| Option A: | Low ignition temperature and high calorific value |
| Option B: | Low ignition temperature and low calorific value |
| Option C: | High ignition temperature and high calorific value |
| Option D: | Moderate ignition temperature and high calorific value |
| | |
| 18. | Spin multiplicity for the two unpaired electrons in excited singlet state is |
| Option A: | 3 |
| Option B: | 2 |
| Option C: | 1 |
| Option D: | 4 |
| | |
| 19. | Which of the following green chemistry principles are applicable to the alternate synthesis |
| 1 17. | which of the following green chemistry principles are applicable to the alternate synthesis |
| 17. | of ibuprofen? |

| | _ |
|-----------|--|
| Option B: | Maximize atom economy, preventaion of waste and reduce unnecessary derivatisation |
| Option C: | Maximize atom economy, use of auxillary substances and increases energy efficiency |
| Option D: | Prevention of waste, renewable feedstock and increased energy efficiency. |
| 20. | Proximate analysis of coal is used to determine |
| Option A: | % of Nitrogen |
| Option B: | % of Sulphur |
| Option C: | % of Hydrogen |
| Option D: | % of Moisture |
| | |
| 21. | Season cracking is a special case of |
| Option A: | Chemical corrosion |
| Option B: | Stress corrosion |
| Option C: | Concentration cell corrosion |
| Option D: | Waterline corrosion |
| 22. | By which process does the knocking starts in diesel engine? |
| Option A: | Due to sudden spontaneous combustion of last portion of fuel |
| Option B: | Due to delay in spontaneous combustion of last portion of fuel |
| Option C: | Due to the rise in temperature of diesel engine |
| Option D: | Due to the presence of straight chain paraffins in the diesel |
| • | |
| 23. | Which of the metallic structure will require more impressed current density for cathodic |
| | protection? |
| Option A: | Water boiler |
| Option B: | a ship hull |
| Option C: | Series of underground gas pipes |
| Option D: | an iron pipe buried in the soil |
| 24. | In impressed current cathodic protection, anode is provided with a gypsum backfill because |
| Option A: | It enhances the rate of reaction |
| Option B: | It decreases metal to metal contact |
| Option C: | It enhances electrical contact with surrounding soil |
| Option D: | It decreases electrical contact with soil |
| 25. | Zn metal is corroding in the presence of acid. After sometimes corrosion stops. The reason is |
| Option A: | addition of few drops of CuSO4 |
| Option B: | Increased Hydrogen overvoltage of Zn |
| Option C: | Decreased Hydrogen Overvoltage of Zn |
| Option D: | Increased diffusion of H ⁺ ions |
| • | |
| 26. | As per Pilling- Bedworth rule, Greater the specific volume ratio, |
| Option A: | Higher is the oxidation corrosion |
| Option B: | Higher is the electrochemical corrosion |
| Option C: | Lower is the oxidation corrosion |
| Option D: | Lower is the electrochemical corrosion |
| 27. | Calculate the emf of a concentration cell at 25°C consisting of two Ag electrodes immersed in solutions of Ag ⁺ ions of 0.2M and 0.01M concentrations |
| Option A: | 0.777V |
| Option B: | -0.077V |
| Option C: | 0.0385V |
| Option D: | 0.077V |
| Option D. | |
| 28. | The number of waves which can pass through a point in one second. This statement justifies, from the following |
| Option A: | Wavelength |

| | 1.5 |
|-----------|--|
| Option B: | Frequency |
| Option C: | Wave number |
| Option D: | Acceleration |
| 20 | |
| 29. | Which is not the selection rule for the electronic transitions from the following |
| Option A: | Spin selection rule |
| Option B: | Symmetry rule |
| Option C: | Hund's rule |
| Option D: | Angular momentum rule |
| 30. | To calculate the net calorific value, the products are |
| Option A: | cooled |
| Option B: | collected |
| Option C: | allowed to escape |
| Option C: | heated |
| Option D. | neated |
| 31. | Which one of the following is not applicable to a green reaction? |
| Option A: | Should not use hazardous reagents in manufacture of products. |
| Option B: | All the atoms of the reactancts should be incorporated to give only the atoms of products |
| Option C: | Should not use hazardous reagents but can produce toxic products |
| Option D: | Should prevent accidents in chemical industries |
| | |
| 32. | The device in which electrical energy from an external source can be used to produce |
| | chemical reactions, such device is known as |
| Option A: | Voltaic Cell |
| Option B: | Electrolytic Cell |
| Option C: | Concentration Cell |
| Option D: | Fuel Cell |
| 22 | From the following which is not used as a reference electrode |
| 33. | |
| Option A: | Hydrogen electrode |
| Option B: | Calomel electrode |
| Option C: | Silver/Silver chloride electrode |
| Option D: | Glass electrode |
| 34. | Mechanism of electrochemical corrosion occurs due to evolution of hydrogen gas when |
| Option A: | Corrosive environment is acidic |
| Option B: | Corrosive environment is alkaline |
| Option C: | Corrosive environment is neutral |
| Option D: | Corrosive environment is alkaline and neutral |
| | |
| 35. | Moisture and volatile matter free 3.3 gm of coal sample was ignited in muffle furnace to a |
| | constant weight of 0.252 gm of residue. What will be the percentage of ash in coal sample |
| Option A: | 1.84 % |
| Option B: | 11.31 % |
| Option C: | 8.00 % |
| Option D: | 6.63 % |
| 26 | |
| 36. | Which of the following metallic coating method involves hot dipping? |
| Option A: | Metal cladding |
| Option B: | Metal Spraying |
| Option C: | Galvanizing |
| Option D: | cementation |
| 37. | For estimation of moisture content in coal sample silica crucible is heated at degree |
| | Celsius Celsius |
| Option A: | 120 degree Celsius |
| | |

| Option B: | 105-110 degree Celsius |
|-----------|---|
| Option C: | 925 degree Celsius |
| Option D: | 750 degree Celsius |
| | |
| 38. | Caustic embrittlement is which type of electrochemical corrosion? |
| Option A: | Waterline corrosion |
| Option B: | Stress corrosion |
| Option C: | Pitting Corrosion |
| Option D: | Galvanic cell corrosion |
| | |
| 39. | is not the green chemistry principle from the following |
| Option A: | High atom economy |
| Option B: | Use of catalyst |
| Option C: | Use of Non-renewable feedstock |
| Option D: | Use of green solvent |
| • | |
| 40. | Nobel metals do not undergo oxidation corrosion because it forms |
| Option A: | Unstable oxide film |
| Option B: | Non-porous oxide film |
| Option C: | Porous stable film |
| Option D: | Volatile oxide film |
| | |
| 41. | Which is used as a green solvent from the following? |
| Option A: | Alcohol |
| Option B: | Acetone |
| Option C: | Supercritical CO ₂ |
| Option D: | Concentrated Sulphuric acid (H ₂ SO ₄) |
| | |
| 42. | Dulong's Pettit formula is used for the theoretical calculations of |
| Option A: | Rating of coal |
| Option B: | Saponification value |
| Option C: | Calorific value |
| Option D: | Sulphur from coal |
| | |
| 43. | In which spectrum, molecule falls from excited state to ground state with the |
| | emission of photon energy? |
| Option | Electromagnetic spectra |
| A: | |
| Option | Absorption spectra |
| B: | |
| Option | Emission spectra |
| C: | |
| Option | Scattering spectra |
| D: | ~ |
| D. | |
| 44. | Which of the following is not synthesized by greener week? |
| | Which of the following is not synthesized by greener way? |
| Option | Acetic acid |
| A: | |
| Option | Adipic acid |
| B: | · |
| Option | Indigo |
| C: | Indigo |
| | Corboryl |
| Option | Carbaryl |
| D: | |
| | |

| 45. | Identify the true statement of the following:- |
|--------------|--|
| Option A: | EMF series includes non metals, metals and their alloys |
| Option B: | EMF series predicts the corrosion characteristics of metals and alloys correctly |
| Option C: | position of metals in EMF series changes with the change in the environment |
| Option D: | - It talks about the relative displacement tendencies of metals and non metals - |
| 46. | Electromagnetic spectrum is nothing but the arrangement of electromagnetic radiations according to |
| Option A: | Increasing order of wavelength & Decreasing order of frequency |
| Option B: | Decreasing order of frequency & Decreasing order wave length |
| Option C: | Increasing order of wavelength & Increasing order of frequency |
| Option D: | Not related to frequency and wavelength order |
| 47. | Which of the following is not a principle of proper designing? |
| Option A: | Avoid the contact of dissimilar metals |
| Option B: | Anode should be smaller than cathode |
| Option C: | Corrosion should not be localized but uniform |
| Option D: | Anode should not be painted. |
| 48. | In galvanic cell energy is converted into energy. |
| Option A: | Chemical into electrical energy |
| Option B: | Electrical into Chemical energy |
| Option C: | Chemical into Chemical energy |
| Option D: | Electrical into Electrical energy |
| 49. | Corrosion between two dissimilar metals in electrical contact is which type of corrosion |
| Option A: | Differential aeration corrosion |
| Option B: | Galvanic corrosion |
| Option C: | Liquid metal corrosion |
| Option D: | Oxygen concentration cell corrosion |
| | |

| 50. | Standard Hydrogen electrode is arbitrarily assigned potential |
|--------------|---|
| Option A: | Zero |
| Option | Two |
| B: | |
| Option C: | One |
| Option | Three |
| D: | |
| 5.1 | |
| 51. | When cathodic area is large and anodic area is small then corrosion is known as |
| Option A: | Galvanic corrosion |
| Option B: | Concentration cell corrosion |
| Option C: | Pitting corrosion |
| Option D: | Dry corrosion |
| 52. | In atmospheric corrosion, which film is developed over Aluminum, Titanium and Vanadium |
| Option A: | Stable porous film |
| Option B: | Volatile film |
| Option C: | Unstable film |
| Option D: | Stable Non porous film |
| 53. | Intergranular corrosion is also known as |
| | |
| Option A: | Galvanic corrosion |
| Option B: | Dry corrosion |
| Option C: | Grain boundary corrosion |
| Option D: | Wet corrosion |
| | |
| 54. | Which of the following constituent is measured in both proximate and ultimate analysis? |
| Option A: | Moisture |
| Option B: | Ash |
| Option C: | Volatile matter |
| | Nitrogen |
| Option D: | Nitrogen |
| | |

| 55. | Which of the following are principal constituents of fuel |
|--------|---|
| Option | Carbon and Hydrogen |
| A: | |
| Option | Oxygen and hydrogen |
| B: | |
| Option | Sulphur and Oxygen |
| C: | |
| Option | Sulphur and Hydrogen |
| D: | |
| | |
| 56. | Quality of petrol is decided by it's |
| Option | Cetane number |
| A: | |
| Option | Octane number |
| B: | |
| Option | Carbon number |
| C: | |
| Option | Hydrogen number |
| D: | |
| | |
| 57. | Which of the following method is used for nitrogen estimation |
| Option | Precipitation method |
| A: | |
| Option | Combustion method |
| B: | |
| Option | Kjeldahl's method |
| C: | |
| Option | Titration method |
| D: | |

Descriptive Section

| 1. | A sample of coal has the following composition by mass: $C = 85\%$, $H = 6\%$, $O = 8\%$, $S = 0.5\%$ and $Ash = 0.5\%$. Calculate HCV and LCV using Dulong's Formula. Given Atomic Weights: $C=12$, $H = 1$, $S = 32$, $O = 16$ |
|----|---|
| 2. | Discuss differential aeration corrosion with the help of a suitable example. |
| 3. | Explain the conventional and Green route of manufacturing Carbaryl. Highlight the green chemistry principle involved. |
| 4. | Define Spectroscopy and Electromagnetic spectrum. Also explain the origin of spectrum. |
| 5. | The standard emf of the following cell is 0.462 V. Cu(s) / Cu ⁺² (aq)(1M) // Ag ⁺ (aq)(1M) / Ag(s) Write the cell reaction. If the standard potential of Cu electrode is 0.337 V, what is the standard potential of Ag electrode? |
| 6. | What is cathodic protection? What are the two types of cathodic protection? |

| | Discuss any one with the help of a suitable diagram. |
|-----|---|
| 7. | Calculate the percentage atom economy for the following reaction with respect to acetanilide. $C_6H_5NH_2 + (CH_3CO)_2O \longrightarrow C_6H_5NHCOCH_3 + CH_3COOH$ Given Atomic Weights: $C = 12$, $E = 1$, |
| 8. | Calculate the volume of air required for complete combustion of 1m^3 of gaseous fuel having the following composition: $CO = 5\%$, $C_2H_4 = 10\%$, $CH_4 = 40\%$, $N_2 = 2.5\%$, $H_2 = 35\%$, $CO_2 = 2\%$, $O_2 = 2.5\%$ Given Atomic Weights: $C = 12$, $C = 16$, $C = 16$, $C = 16$ |
| 9. | How do the following factors affect the rate of corrosion: (i) relative areas of anodic to cathodic part (ii) position of metal in galvanic series. |
| 10. | (i) Distinguish between anodic and cathodic coating. |
| | (ii) What is Biodiesel? Give the trans-esterification reaction of the preparation of Biodiesel. |
| 11. | Explain the conventional and Green route of manufacturing Adipic acid. Highlight the green chemistry principle involved. |
| 12. | Give in tabular form the relation between electromagnetic spectrum, types of spectroscopy and corresponding energy changes. |
| 13. | What is an electrochemical cell? What are the types of electrochemical cell? Briefly discuss the different types. |
| 14. | What is green chemistry? Explain the principle of 'Designing safer chemicals and products' and the principle of 'Use of renewable feedstocks'. |
| 15. | (i) 1 g of coal sample was used for determination of nitrogen by Kjeldhal's method. The ammonia evolved was passed into 50 ml of 0.1 N H ₂ SO ₄ . The excess acid required 42 mL of 0.1 N NaOH for neutralisation. Calculate the percentage of N in the sample. |
| | (ii) One of the design and material selection principle is 'the anodic material should not be painted or coated'. Give reason for the same. |
| 16. | Discuss season cracking. |
| 17. | What are 'oxygenates' used in the fuel industry? Where and why are they added? Explain by giving examples. |

| 18. | By kjeldahl's method 3 gm of coal sample was analysed. The ammonia evolved |
|-----|---|
| | was absorbed in 40 ml of 0.5 N H2SO4. After absorption, the excess |
| | H2SO4 required 18.5 ml of 0.5N KOH for neutralization. A coal sample was |
| | subjected to ultimate analysis 2.45 g of coal on combustion in a Bomb-Colorimeter |
| | gave 0.67 of BaSO4. Calculate percentage of Nitrogen and sulphur. |
| 19. | Discuss Bimetallic corrosion with the help of a suitable example |
| 20. | Explain the conventional and Green route of manufacturing indigo dye. Mention |
| | the green chemistry principles involved. |
| 21. | Explain construction and working of SHE with neat and labeled diagram. |

| 23. Draw a diagram of a cell made up of aluminium and silver half cells. Give representation of the cell along with electrode reactions. 24. Calculate the volume and weight of air required for complete combustion of 1m3 o gascous fuel having the following composition: CO = 10%, C3HS = 12%, CH 4 = 30%, N 2 = 3 %, H 2 = 40%, CO2 = 3%, O2 = 2.0% (Molecular weight of air −28.8 V49). 25. How do the following factors related to nature of environment affect corrosion? i) Anodic and Cathodic area ii) Purity of metal 26. CH3 CH3 CH3 CH4 CH4 CH4 CH5 CH2 + C2H5 CH + NaBr Find atom economy of the reaction with respect to 2-methyl propene. 27. Explain 'Selection rules' that basically decide which transitions are 'allowed or forbidden' in spectroscopy 28. Distinguish between Octane number and Cetane number 29. i) Explain the principle of 'use of catalytic reagent' with respect to green chemistry. ii) How would you synthesize benzimidazole using green catalyst. 30. Calculate the minimum amount of air required for the complete combustion of 1 kg of fuel containing C= 80%, H= 6%, O=8%, S= 1.5%, H2O= 1.0%, N=1.5% and ash= rest. 31. Explain why a "pure Zinc metal rod half immersed in saline water starts corroding at the bottom' Explain with neat diagram, reactions & corrosion product formation. 32. Explain construction and calculate the standard emf of the following cell. Cd(s) Cd +2 (aq)(1M) Ni2+ (aq)(1M) Ni(s) If the standard potential of 'Cd electrode is -0.40 V and the standard potential of Niclectrode is -0.25 V 34. Write a note on Catalytic converter with the help of chemical reactions. 35. i) Give significance of determination if moisture in coal. ii) What is season cracking? 36. Which molecule is used as a component in various therapeutic drugs? Give any one traditional and green synthesis of the same. 37. Write the Nernst Equation and calculate Emf of the following cell at 298K: Mg(s)/Mg2+(0.001M) Cu2+(0.0001M)/Cu(s). Given: Bought for the distinguish of the same. 37. With the help of tradit | 22. | Explain different types of electromagnetic radiations. |
|---|-----|---|
| representation of the cell along with electrode reactions. 24. Calculate the volume and weight of air required for complete combustion of 1m3 or gaseous fuel having the following composition: CO = 10%, C3H8 = 12%, CH4 = 30%, N 2 = 3 %, H 2 = 40%, CO2 = 3%, O2 = 2.0% (Molecular weight of air -28,949). 25. How do the following factors related to nature of environment affect corrosion? i) Anodic and Cathodic area ii) Purity of metal 26. 27. 28. 28. 29. 29. 29. 20. 21. 22. 23. 24. 24. 25. 26. 26. 27. 28. 28. 29. 29. 20. 20. 21. 22. 22. 23. 24. 25. 25. 26. 27. 28. 28. 29. 29. 20. 20. 20. 21. 22. 22. 23. 24. 25. 25. 26. 27. 28. 29. 29. 20. 20. 20. 21. 22. 23. 24. 24. 25. 26. 27. 28. 29. 29. 20. 20. 20. 21. 22. 23. 24. 25. 26. 27. 28. 29. 29. 20. 20. 20. 21. 22. 22. 23. 24. 24. 25. 26. 27. 28. 29. 29. 20. 20. 21. 22. 23. 24. 24. 25. 26. 27. 27. 28. 28. 29. 20. 20. 21. 22. 23. 24. 24. 25. 26. 27. 27. 28. 28. 29. 20. 20. 21. 22. 23. 24. 24. 24. 25. 26. 27. 27. 28. 28. 29. 20. 20. 21. 22. 23. 24. 24. 24. 25. 26. 27. 27. 28. 28. 29. 29. 20. 20. 20. 21. 22. 23. 24. 24. 24. 24. 24. 25. 26. 27. 27. 28. 28. 29. 29. 20. 20. 21. 22. 23. 24. 2 | | |
| 24. Calculate the volume and weight of air required for complete combustion of Im3 o gaseous fuel having the following composition: CO = 10%, C3H8 = 12%, CH 4 = 12%, CH 4 = 28,949. 25. How do the following factors related to nature of environment affect corrosion? i) Anodic and Cathodic area ii) Purity of metal 26. CH3 CH3 CH3 H5C - C - CH3 MAG C+H2 H5C - C - CH2 + C2H3-OH + NaBr Brid Br Find atom economy of the reaction with respect to 2-methyl propene. 27. Explain Selection rules' that basically decide which transitions are 'allowed or forbidden' in spectroscopy 28. Distinguish between Octane number and Cetane number 29. i) Explain the principle of 'use of catalytic reagent' with respect to green chemistry. ii) How would you synthesize benzimidazole using green catalyst. 30. Calculate the minimum amount of air required for the complete combustion of 1 kg of fuel containing C = 80%, H = 6%, O = 8%, S = 1.5%, H2O = 1.0%, N = 1.5% and ash = rest. 31. Explain why a "pure Zine metal rod half immersed in saline water starts corroding at the bottom" Explain with neat diagram, reactions & corrosion product formation. 32. Explain construction and working of a reference electrode which is used in pH meter. 33. Write cell reaction and calculate the standard emf of the following cell. Cd(s) [Cd + 2 (aq)(1M) Ni2+ (aq)(1M) Ni(s) 34. Write a note on Catalytic converter with the help of chemical reactions. 35. i) Give significance of determination if moisture in coal. ii) What is season cracking? 36. Which molecule is used as a component in various therapeutic drugs? Give any one traditional and green synthesis of the same. 37. Write the Nernst Equation and calculate Emf of the following cell at 298K: Mg(s)/Mg2+(0.001M) Cu2+(0.001M)/Cu(s). 38. Write the Nernst Equation and appress synthesis of ibuprofen, list the principles of arcan chemistry involved in it. <l< th=""><th></th><th>1</th></l<> | | 1 |
| Anodic and Cathodic area ii) Purity of metal 26. CH3 H3C - C - CH3 Na0 C-H5 BT Find atom conomy of the reaction with respect to 2-methyl propene. 27. Explain 'Selection rules' that basically decide which transitions are 'allowed or forbidden' in spectroscopy 28. Distinguish between Octane number and Cetane number 29. i) Explain the principle of 'use of catalytic reagent' with respect to green chemistry. ii) How would you synthesize benzimidazole using green catalyst. 30. Calculate the minimum amount of air required for the complete combustion of 1 kg of fuel containing C= 80%, H= 6%, O=8%, S= 1.5%, H2O= 1.0%, N= 1.5% and ash= rest. 31. Explain why a "pure Zine metal rod half immersed in saline water starts corroding at the bottom' Explain with neat diagram, reactions & corrosion product formation. 32. Explain construction and working of a reference electrode which is used in pH meter. 33. Write cell reaction and calculate the standard emf of the following cell. Cd(s) Cd+2 (aq)(1M) Ni2+ (aq)(1M) Ni(s) If the standard potential of Cd electrode is -0.40 V and the standard potential of Ni electrode is -0.25 V 34. Write a note on Catalytic converter with the help of chemical reactions. 35. i) Give significance of determination if moisture in coal. ii) What is season cracking? 36. Which molecule is used as a component in various therapeutic drugs? Give any one traditional and green synthesis of the same. 37. Write the Nernst Equation and calculate Emf of the following cell at 298K: Mg(s)/Mg2+(0.001M) Cu2+(0.0001M)/Cu(s). Given: E ^O Cu2+t/Cu = 0.34 V and E ^O Mg(s)/Mg2+(0.001M) Cu2+(0.0001M)/Cu(s). Given: E ^O A sample of coal sample. 40. A sample of coal was found to contain C = 80%, H = 5%, O = 1%, N = 2%, Ash=12%, Calculate the minimum amount of air required for complete combustion of 1 kg of coal sample. 41. Draw the energy level diagram showing various molecular energies and explain why molecular spectra contains broad bands whereas atomic spectra consist of sharp lines. | 24. | Calculate the volume and weight of air required for complete combustion of 1m3 of gaseous fuel having the following composition: CO = 10%, C3H8 = 12%, CH 4 = 30%, N 2 = 3 %, H 2 = 40%, CO2 = 3%, O2 = 2.0% (Molecular weight of air |
| Find atom economy of the reaction with respect to 2-methyl propene. 27. Explain 'Selection rules' that basically decide which transitions are 'allowed or forbidden' in spectroscopy 28. Distinguish between Octane number and Cetane number 29. 10 | 25. | |
| forbidden' in spectroscopy 28. Distinguish between Octane number and Cetane number i) Explain the principle of 'use of catalytic reagent' with respect to green chemistry. ii) How would vou synthesize benzimidazole using green catalyst. 30. Calculate the minimum amount of air required for the complete combustion of 1 kg of fuel containing C= 80%, H= 6%, O=8%, S= 1.5%, H2O= 1.0%, N= 1.5% and ash= rest. 31. Explain why a "pure Zinc metal rod half immersed in saline water starts corroding at the bottom" Explain with neat diagram, reactions & corrosion product formation. 32. Explain construction and working of a reference electrode which is used in pH meter. 33. Write cell reaction and calculate the standard emf of the following cell. Cd(s) Cd+2 (aq)(1M) Ni2+ (aq)(1M) Ni(s) If the standard potential of Cd electrode is -0.40 V and the standard potential of Ni electrode is -0.25 V 34. Write a note on Catalytic converter with the help of chemical reactions. 35. i) Give significance of determination if moisture in coal. ii) What is season cracking? 36. Which molecule is used as a component in various therapeutic drugs? Give any one traditional and green synthesis of the same. 37. Write the Nernst Equation and calculate Emf of the following cell at 298K: Mg(s)/Mg2+(0.001M) Cu2+(0.0001M)/Cu(s). Given: E⁰_(102+1/Cu) = 0.34 V and E⁰_{Mg2+1/Mg} = -2.37 V 38. With the help of traditional and green synthesis of ibuprofen, list the principles of green chemistry involved in it. 39. What is knocking? How is knocking of gasoline related to chemical structure of hydrocarbons present in it? Define octane rating. 40. A sample of coal was found to contain C = 80%, H = 5%, O = 1%, N = 2%, Ash=12%. Calculate the minimum amount of air required for complete combustion of 1kg of coal sample. 41. Draw the energy level diagram showing various molecular energies and explain wh | 26. | $H_3C - C - CH_3$ $\xrightarrow{\text{NaO C}_2H_5}$ $H_3C - C = CH_2 + C_2H_5OH + \text{NaBr}$ Br |
| i) Explain the principle of 'use of catalytic reagent' with respect to green chemistry. ii) How would you synthesize benzimidazole using green catalyst. 30. Calculate the minimum amount of air required for the complete combustion of 1 kg of fuel containing C= 80%, H= 6%, O=8%, S= 1.5%, H2O= 1.0%, N= 1.5% and ash= rest. 31. Explain why a "pure Zinc metal rod half immersed in saline water starts corroding at the bottom" Explain with neat diagram, reactions & corrosion product formation. 32. Explain construction and working of a reference electrode which is used in pH meter. 33. Write cell reaction and calculate the standard emf of the following cell. Cd(s) Cd+2 (aq)(1M) Ni2+ (aq)(1M) Ni(s) If the standard potential of Cd electrode is -0.40 V and the standard potential of Ni electrode is -0.25 V 34. Write a note on Catalytic converter with the help of chemical reactions. 35. i) Give significance of determination if moisture in coal. ii) What is season cracking? 36. Which molecule is used as a component in various therapeutic drugs? Give any one traditional and green synthesis of the same. 37. Write the Nernst Equation and calculate Emf of the following cell at 298K: Mg(s)/Mg2+(0.001M) Cu2+(0.0001M)/Cu(s). Given: \$\frac{0}{0}(u2+f/Cu) = 0.34\$ V and \$\frac{0}{Mg2+f/Mg} = -2.37\$ V 38. With the help of traditional and green synthesis of ibuprofen, list the principles of green chemistry involved in it. 39. What is knocking? How is knocking of gasoline related to chemical structure of hydrocarbons present in it? Define octane rating. 40. A sample of coal was found to contain C = 80%, H = 5%, O = 1%, N = 2%, Ash=12%. Calculate the minimum amount of air required for complete combustion of 1 kg of coal sample. 41. Draw the energy level diagram showing various molecular energies and explain why molecular spectra contains broad bands whereas atomic spectra consist of sharp l | 27. | - |
| chemistry. ii) How would you synthesize benzimidazole using green catalyst. Draw the energy level diagram showing various molecular energies and explain why molecular spectra contains broad bands whereas atomic spectra consist of sharp lines. 42. A cell uses Zn2+/Zn and Ag+/Ag electrodes. Write the cell representation, Half-cell reactions, Net cell reactions and calculate the standard Emf of the cell. | 39. | What is knocking? How is knocking of gasoline related to chemical structure of |
| why molecular spectra contains broad bands whereas atomic spectra consist of sharp lines. 42. A cell uses Zn2+/Zn and Ag+/Ag electrodes. Write the cell representation, Half-cell reactions, Net cell reactions and calculate the standard Emf of the cell. | | A sample of coal was found to contain $C = 80\%$, $H = 5\%$, $O = 1\%$, $N = 2\%$, Ash=12%. Calculate the minimum amount of air required for complete combustion of 1kg of coal sample. |
| 42. A cell uses Zn2+/Zn and Ag+/Ag electrodes. Write the cell representation, Half-cell reactions, Net cell reactions and calculate the standard Emf of the cell. | 41. | why molecular spectra contains broad bands whereas atomic spectra consist of |
| | 42. | A cell uses Zn2+/Zn and Ag+/Ag electrodes. Write the cell representation, Half-cell reactions, Net cell reactions and calculate the standard Emf of the cell. |

| 43. | Define Green chemistry. As per Green chemistry Principles, why is it essential to design energy efficient process. Explain with suitable examples. |
|-----|---|
| 44. | What is oxidation corrosion. Name the different types of oxide layer formed and state which oxide layers are non-protective in nature. Explain with suitable examples. |
| 45. | Determine C, H, N elements as % from the following observations in experiments of |
| | analysis of coal. |
| | 0.25g coal on burning in a combustion tube and passing the gases through tubes containing |
| | anhydrous CaCl2 and KOH increases their weight by 0.09 g and 0.8g respectively. In Kjeldahl's method, ammonia evolved by 0.42g coal was absorbed in 49.5ml of 0.12 N HCl |
| | solution. After absorption, the excess acid required 36.5ml of 0.12 N NaOH for |
| | neutralization. |
| 46. | What are antiknocking agents? Explain the factors affecting antiknocking characteristics of a compound |
| 47. | What is electrochemistry? Write the cell reaction and Calculate the standard emf of the following cell (5) |
| | $Zn_{(s)} Zn_{(aq)}^{2+} (1M) Cu_{(aq)}^{2+} (1M) Cu_{(s)}$ |
| | Given: $E_{Zn}^0 = -0.763 \text{ V}$ and $E_{Cu}^0 = 0.337 \text{ V}$ |
| 48. | What is Green Chemistry? Calculate percentage atom economy for the following reaction |
| | with respect to acetophenone (5) |
| | $C_6H_6 + CH_3COCl$ — $C_7H_5COCH_3 + HCl$ |
| | Acetophenone |
| 40 | (Atomic weights: C=12, H=1, O=16, Cl=35.5) |
| 49. | Define corrosion. Explain sacrificial anode method with suitable diagram. (5) |
| 50. | Calculate the weight and volume of air required for complete combustion of 1 kg of coal |
| | containing C=65%, H=4%, O=7%, N=3%, moisture=15% and remaining is ash. (molecular weight of |
| | c=0.576, $r=476$, $r=576$, moisture=1.576 and remaining is asii. (molecular weight of air=28.94 gm) |
| 51. | Give the classification of Spectroscopy based on atomic level of study. |
| | Distinguish between absorption and emission spectra. (2+3) |
| 52. | What is metallic coating? Differentiate between Galvanizing and Tinning. (5) |
| 53. | List 12 principles of Green Chemistry. Explain Biodiesel as a Green fuel (5) |
| 54. | List the factors affecting the rate of corrosion. Explain Galvanic cell Corrosion (5) |
| 55. | 3.2 gm of coal in Kjeldahl's experiment evolved NH ₃ gas was absorbed in 40 ml of 0.5 N H ₂ SO ₄ . After absorption the excess acid required 16 ml of 0.5N NaOH for complete |
| | neutralization. 2.5 gms of coal sample in quantitative analysis gave 0.42 gm BaSO4. |
| | Calculate the % N and S. (5) |
| 56. | Define spectroscopy and explain different regions of electromagnetic spectrum |
| | with the help of diagram |
| 57. | What is Electrochemistry? Differentiate between electrolytic cell and Galvanic cell |
| 58. | List the 12 Principles of Green chemistry and calculate % atom economy for the |
| | following reaction with respect chlorobenzene |
| | $C_6H_6 + Cl_2 - C_6H_5Cl + HCl$ |
| | Atomic weight $C = 12$, $H = 1$, $Cl = 35.5$ |
| 59. | What is Electrochemical corrosion? Explain Hydrogen evolution mechanism with |
| | the help of diagram |
| 60. | Calculate the amount of air needed for complete combustion of 1Kg of coal containing $C = 65\%$, $H = 13\%$, $O = 6\%$, $N = 2\%$ $S = 4\%$ |
| 61. | Give construction and working of hydrogen-oxygen fuel cell with the help of |
| | diagrams and reactions. |
| 62. | What is standard potential? Calculate standard emf of following cell |
| | $ Zn(s) Zn^{2+}_{(aq)}(1M) Cu^{2+}_{(aq)}(1M) Cu_{(s)} $ |
| | Given E^0 Zn =-0.763 V and E^0 Cu = 0.337V |
| | C. C. C. C. C. C. C. C. |

| 63. | Explain the mechanism of 'Rusting of iron in water' with the help of diagram and reactions. |
|-----|--|
| 64. | Explain sacrificial anode method for prevention of corrosion with the help of diagram and also distinguish between Galvanizing and Tinning |
| 65. | What is Fuel? and what are ideal characteristics of fuel. Give classification of fuels. |
