

Vidya Vikas Education Trust's

# Universal College of Engineering

Accredited with B+ Grade by NAAC

(Permanently Unaided | Approved by AICTE, DTE & Affiliated to University of Mumbai)

Gujarati Linguistic Minority Institution

## Coffee & Code ;

An Initiative by the Department of Computer Engineering

### VISION

To be recognized as a department that provides quality technical education and research opportunities that eventually caters to helping and serving the community.

### MISSION

- To groom the students to participate in curricular and co-curricular activities by providing efficient resources.
- To motivate the students to solve real world problems to help the society grow.
- To provide a learning ambience to enhance innovations, team spirit and leadership qualities for students.

# ***Machine learning innovations in 2022***

The applications of machine learning in the real world have made our daily tasks more feasible, swifter, efficient, and precise. Powered by data science, if machine learning applications are trained accurately, they can complete the tasks way more quickly than humans. This article features the top five best machine learning innovations in 2022.

- **Tiny ML:** When it comes to Tiny ML, microcontrollers are the most important. These technologies can shrink deep learning networks to fit into any small hardware system. The newly embedded machine frameworks are enabling high-powered AI-IoT devices to perform efficiently.
- **Quantum ML:** The interdisciplinary area where quantum computing is mixed with machine learning is called Quantum ML. This new feature in quantum technology facilitates space exploration, understanding nanoparticles, and such other advanced researches efficiently.
- **Auto ML:** Auto ML bridges the gap by providing an accessible solution that does not rely on ML experts. It provides simplification to data scientists working on machine learning projects by the use of templates.
- **MLOps:** MLOps focuses on reliability and efficiency. It is a procedure to develop ML solutions so that they can be used in businesses for more efficiency. It automates data management on larger scales easier, ensuring minimum human errors.
- **Full stack deep learning:** Full Stack Deep Learning helps you bridge the gap from training machine learning models to deploying AI systems in the real world.

# Leading companies' AI Blogs

Being a data scientist requires you to keep up with the latest innovations and discoveries, but there's so much information coming in from so many directions, it's easy to get lost in the stream. So what should you focus on? Well, it depends on you — but to get you going, here's my reading list of AI sources that allows me to keep up to date with the latest innovative ideas.

The field of Machine Learning and Artificial Intelligence is changing rapidly. Five years ago, classical Machine Learning was the hottest trend; now it's just like an iPhone 6S — outdated. Deep Learning dominates the market these days, and if you'll come back to this post in 2025, there's a good chance we've moved way past beyond this

These companies are usually the ones that pop to your mind whenever you think of who actually use AI in the real world. While many more interesting and AI-leading companies exist, these four are usually my go-to blogs.

Google: There's probably no reason for me to explain why I open my list with Google. These guys come up with new stuff like French boulangeries baking baguettes — on a daily basis. The Google AI Blog is an excellent source to keep up with latest innovation by the tech-giant, and they tend to explain their ideas in a very professional way. Another source for academic papers specifically is the Google Research Publication Database, narrowed down to AI topics.

DeepMind: While technically a part of Google, DeepMind tend to be a somewhat of an autonomy within the corporation, which is said to sometimes rival with Google internal AI department. Being the ones behind some of the greatest breakthroughs of AI in the last few years, such as AlphaGo, AlphaGo Zero and AlphaFold, their Research Blog and publications is certainly a great source for keeping up to date with AI.

Facebook AI: Another company you've probably already thought of, Facebook publishes many AI related papers, which can be found on their publications page. You can also checkout their blog, though I find it to be more like reading Wired articles, compared to Google AI's blog.

Microsoft Research: Yes, Microsoft. The company that once ruled us all and then faded away, has made a massive leap forward in all aspects — and their AI research and capabilities are no different. They too own an impressive amount of AI publications of the highest level. They also have two similar and relevant blogs, their AI Blog and Research Blog, yet both bear the same Wired feeling I mentioned before.

## Faculty Achievement

Ms. Priyanka Bhoir has attended one week FDP program on Recent tools for integration of smart systems and Mr. Ashraf Siiddiqui has attended workshop on 55th Youth festival for academic year 22-23.

## President of India

**2002-2004**

Animal Husbandry  
Department, Govt.  
of Odhisa

**2002**

Department of  
Fisheries Govt.  
of Odhisa

**1997**

- Vice-President  
State S.T.  
Morchha, BJP
- Won As  
Councilor and  
became Vice-  
Chairperson  
Rairangpur

Draupadi Murmu took oath as the 15th President of India on July 25, 2022. Draupadi Murmu is a tribal leader from Rairangpur in the Mayurbhanj district in Odisha. Draupadi Murmu is a soft-spoken leader who made her way into the politics of Odisha with her sheer hard work. Draupadi Murmu after winning the Presidential elections 2022, has become the first tribal and the second woman to hold the highest office. Draupadi Murmu started out as a school teacher before entering state politics. Murmu worked as an assistant professor at the Shri Aurobindo Integral Education and Research Institute, Rairangpur, and as a Junior Assistant at the Irrigation department of the Government of Odisha.
