Data privacy as a discipline: How this modern framework improves the safety of your IT systems

Organizations value the protection and privacy of their data and control who has access to it. They certainly do not want their sensitive information to be privy to cyber criminals or their competition. If an organization's security system is weak, it makes the hacker's task to extract all confidential information very easy.

The collection and utilization of private data by organizations are on the rise. The user data is gathered through various means such as surveys, voluntary sharing of information by clients and websites tracking client engagement systems. This rampant collection and usage make it imminent for organizations to secure the data. Therefore, the privacy of information and data is a crucial aspect of information technology systems. It is required to prevent any spillage of private data.

Improvement in the safety of IT systems

In recent years, advancement in technology is providing organizations with a more secure system to protect their sensitive information and data. If these technologies are integrated into the systems properly, it will provide protection against cyber-criminal activities and also against human error and insider threats. Ways modern technology has improved IT systems are -

1. Data discovery and Classification of tools:

Sensitive and confidential information may reside in unstructured or structured data repositories, which can include databases, cloud environments and data warehouses. With the help of data detection and classification solutions, it can automate the procedure of identifying critical information, as well as evaluate and rectify any vulnerability.

2. Activity monitoring of Data:

Activity monitoring tools analyze and evaluate data usage patterns, spot anomalies, enable security teams to supervise who is accessing the data, and identify risks. Alerting and notifications integration helps to notify about abnormal activities.

3. Risk analysis and Vulnerability Evaluation:

These solutions provide ease to the process of detecting and mitigating any vulnerability such as - weak passwords, misconfiguration, or out-of-date software. It also identifies and locates data information which is at great risk of exposure.

4. Automated Compliance Reporting:

Comprehensive data protection methods with capabilities of automated reporting provide a centralized repository for organization-wide compliance audit trails.

The best practice companies can use to adopt data privacy discipline is to include a holistic approach toward data protection. They should have a clear understanding of all of their sensitive data and information. In a world where everything relies on data, figuring out measures to keep data private and secure is a significant feat. Companies can also hire a reputed firm with high capabilities in security and privacy tasks and create robust security infrastructure for their business and clients

VR technology has taken the tech world by storm and altered the expectations and imaginations of the tech enthusiasts. Virtual Reality creates an artificial environment with software. The artificial environment gets presented to the audiences in a way which encourages them to accept and believe it as a real environment. VR technology creates primary experience focusing on two senses, i.e., vision and sound.

Virtual Reality Technology immerses the audiences or users into the virtual world generated by the computer. Apart from the simple concept of creating an artificial environment with VR technology, it will be helpful to learn and understand the technology behind the immersive technology. Understanding the basic terminology of VR technology will broaden mind and one can understand that VR is far beyond head-mounted display or virtual gaming experience!

Virtual Reality simulates the vision with a perfect approach towards creating an impressive 3D environment. Apart from creating imagery VR experiences, VR technology completely engrosses the virtual environment with certain other elements. The impact of sound perfectly syncs with the visuals creating engaging effects. The users get assurance on the virtual environment using a headphone and 3D sound effects. 22nd September – 4th October – NAVRATRI 9 DAYS

Navratri, (Sanskrit: "Nine Nights") in full Sharad Navratri, Navratri also spelled Navaratri, in Hinduism, major festival held in honour of the divine feminine. Navratri occurs over 9 days during the month of Ashvin, or Ashvina (in the Gregorian calendar, usually September–October). It often ends with the Dussehra (also called Vijayadashami) celebration on the 10th day. In some parts of India, Dussehra is considered a focal point of the festival, making it effectively span 10 days instead of 9. There are four similar festivals, also called Navratri, which are held at various stages of the year. However, the early autumn festival, also called Sharad Navratri, is the most significant. It begins on the same day as Durga Puja, a 10-day festival devoted to the victory of the goddess Durga, which is particularly celebrated in certain eastern states.

Navratri is celebrated differently in India's various regions. For many people it is a time of religious reflection and fasting, while for others it is a time for dancing and feasting. Among fasting customs are observing a strict vegetarian diet and abstaining from alcohol and certain spices. Dances performed include garba, especially in Gujarat. Typically, the festival's nine nights are dedicated to different aspects of the divine feminine principle, or shakti. While the pattern varies somewhat by region, generally the first third of the festival focuses on aspects of the goddess Durga, the second third on the goddess Lakshmi, and the final third on the goddess Sarasvati. Offerings are often made to the goddesses and their various aspects, and rituals are performed in their honour. One popular ritual is Kanya Puja, which takes place on the eighth or ninth day. In this ritual nine young girls are dressed as the nine goddess aspects celebrated during Navratri and are worshipped with ritual foot washing and given offerings such as food and clothing.
